VISION PLAN OPTIONS

CSEA EMPLOYEE BENEFIT FUND

In order to be eligible for the following riders, they must be negotiated with your employer as part of your collective bargaining agreement.

Anti-Reflective Coating

A coating which allows a much higher percentage of light to pass through the lens. The increased transmittance of light reduces reflections that can hinder your vision. In addition, lenses appear crystal clear and nearly invisible due to the elimination of reflected light. Reflection free coating improves the look, comfort, and optical clarity. May be purchased separately under the Silver, Gold and Platinum Plans.

High Index Lenses

Plastic or polycarbonate lenses which are 20-25% thinner and lighter than conventional lenses. High Index lenses are much thinner, more attractive and their lighter weight makes them more comfortable to wear. May be purchased separately under the Silver, Gold and Platinum Plans.

Polarized Lenses

Two lenses laminated together which effectively block glare; especially useful near water or snow. May be purchased separately under the Gold and Platinum Plans.

Plastic Photosensitive Lenses

A plastic lens which gradually darkens in sunlight to provide comfort and convenience. May be purchased separately under the Platinum Plan.

Ultra Violet Coating

A coating applied to lenses to block up to 99% of damaging UV rays via exposure to the sun. May be purchased separately under the Silver, Gold and Platinum Plans.

Occupational Vision

Members (not available for spouses or dependents) whose job duties require 50% or more of their work on a computer or driving a vehicle will be examined and a determination made which may warrant a different prescription and an additional pair of glasses. This benefit must be used at a plan provider and at the same time as your regular vision benefit. This option is included in the Gold Plan and may be purchased separately under the Platinum Plan.
